## SECTION II - SPECIFICATIONS

### A. PROJECT BACKGROUND

In accordance with the approved facility's Methane Remediation Plan (MRP), an extension to the existing Methane Venting Trench (MVT) is to be installed at the Henry County – Windy Hill Road Landfill [Permit Number 075-011D(SL)]. This facility, located in McDonough, Georgia, is a closed MSWL facility. The trench extension location is currently being used as a County driveway and parking lot.

The extension to the MVT is being installed to reduce gas pressures within the waste unit and, thereby, reduce migration of gaseous contaminants across the property boundaries.

### B. BIDDER QUALIFICATIONS

Bidders must provide references for at least three similar projects completed within the past five years along with a brief description of each project. Experience with long linear excavations, including both excavation and backfill, is required.

### C. PROJECT DESCRIPTION

The project includes the installation of a trench approximately 450 feet in length located on the east side of the facility between the landfill and Henry County Middle School. The planned trench extension will connect to existing vacuum lines located in the area. The exact location of the connection will be determined by the County's engineering consultant, Advanced Environmental Management (AEM). It should be noted there are several potential connection locations for the trench extension. AEM will determine which connection should optimize performance of the extension.

### D. PROJECT SPECIFICATIONS

Specifications for this project are provided in the following sections. It is the County's intent to allow the CONTRACTOR some flexibility for innovative techniques and cost saving measures. The specifications provided herein, along with the details provided in the attached plans, are intended to provide a baseline performance measurement. Any changes to these specifications or items not specified completely must be approved by AEM and the County prior to submitting bids.

1. Location: Windy Hill Park, McDonough GA (see Exhibit Figure 1).
2. Conditions: asphalt parking lot, very little traffic, should be no access problems or traffic problems. There is sufficient room adjacent to the work area for temporary storage of 57 stone, PVC piping, and other supplies and equipment.
3. State law requires that the CONTRACTOR contact the Utility Protection Center at 1-800-272-7411 at least 72 hours in advance of construction commencing.
4. The existing surface is asphalt (~ 4 inches thick) and must be restored to the same thickness as is currently present.
5. CONTRACTOR will excavate a trench not to exceed 450 linear feet of trench, as close to 20 feet in depth as reasonably possible with a track hoe and a ~3 foot wide bucket. Based on previous experience with site soils it is likely that portions of the trench will cave in during the trenching. The trench will probably also widen to an average width of 5 feet and an average depth of 15 feet. Actions should be taken to minimize

this affect. Backfilling with 57 stone gravel (see #4 below), as soon as an interval of the trench is excavated, will help maximize the finished depth of the trench. Shoring is not required.

6. After soil removal the trench will need to be backfilled to a depth of ~ 4 feet from the surface with 57 stone gravel or equivalent. This can be accomplished using a front loader or equivalent. The purpose of the stone is to greatly enhance permeability to air and methane gas.
7. After the gravel is installed 4-inch Schedule 40 (no exceptions) perforated PVC piping will be run down the center of the trench. Perforated pipe must contain at least twelve ¼-inch holes per foot spaced evenly around the 4-inch PVC (see Construction Details drawing for more detail). The perforations can be field or shop drilled. AEM must approve the perforations. Glue connections are acceptable.
8. At the location determined by AEM a riser pipe approximately 7 feet in height will be installed with a 4-inch “T” connection. The riser will extend upwards 2 to 3 feet above the surface and then with another “T” connection will be turned 90 degrees and reduced with a 4” x 2” bushing. A 2-inch PVC ball valve will be installed. The pipe will then be extended and turned as appropriate to make the connection with an existing 3-inch vacuum line. The onsite AEM engineer will determine where the connection will be made and will assist with any design modifications, as needed.
9. Construction details for this project are provided in the attached drawing Exhibit A - “Construction Details”.
10. The remaining trench will be backfilled with the same soils just excavated from the trench (clay soils are preferred) to near the surface. The clayey soils will be packed down with existing equipment (track hoe bucket or similar) to a depth which will accommodate installation of a full 4-inches of asphalt as a surface covering.
11. It is expected the existing asphalt is about 4 inches thick. Asphalt will be replaced for the full length and width of the trench.
12. 4-inch cement-filled, metal pipe bollards will be installed around the aboveground vacuum line connection to prevent the connection from damage. AEM will determine if the bollards need to be installed.

## **E. REPORTING**

Final drawings and reports for the County and for GA DNR-EPD will be provided by AEM.

NOTE: AEM will provide onsite construction oversight, methane gas monitoring, and design modification recommendations to the Contractor.

## **F. SITE CONTROLS**

Site controls will be required to minimize erosion/sediment transport. Silt fencing will be installed by the Contractor as needed to prevent erosion at the construction area. All equipment and machinery shall be equipped with exhaust mufflers maintained in good working order so as to reduce operating noise to minimal levels.

Soil moisture levels shall be controlled to minimize dust generation due to equipment movement or wind conditions.

No burning operations will be permitted.

Trucks shall be routed in such a way as to minimize disruption to ongoing operations at the site. Additionally, all loads must be covered to prevent loss of materials from loaded vehicles.

All disturbed areas will be monitored and actions taken as necessary to prevent transport of soils from the work area. All disturbed areas to original or better conditions (including the asphalt surfaces).

#### **G. SURVEYING**

Final Surveying will be performed by others. Location of the proposed Trench Extension will be marked in advance by AEM (see also Figure 1).

#### **H. HEALTH AND SAFETY**

The Contractor is required to maintain an adequate health and safety program that protects workers and the public from dangers that might reasonably be encountered during the course of this project. A written Health and Safety Plan should be prepared for this facility and submitted along with the Contractor's bid. The Plan should comply with 1) OSHA Regulation 2226-10R 2015, Trenching and Excavation Safety, U.S. Department of Labor Occupational Safety and Health Administration, and 2) OSHA Regulation 29 CFR 1910.190, Hazardous Waste Operations and Emergency Response.

NOTE: AEM will provide onsite construction oversight and methane gas monitoring. These results will be shared with the Contractor to help ensure a safe working environment.

#### **I. SOILS DISPOSAL**

It is expected that Soils removed during excavation will be reused to finish backfilling the trench extension. However, should there be additional soils left over they may be disposed of in the area. AEM will direct the Contractor to appropriate onsite disposal locations.

#### **J. SUBSTITUTIONS**

As referenced previously, Henry County is interested in providing the chosen Contractor with sufficient flexibility to suggest alternative methods or materials to complete this project. Such alternatives must be comparable in quality and meets the County's needs.

All substitutions must be approved in writing by AEM before they will be accepted by the County. To obtain approval, the contractor is required to contact AEM and provide all data requested by AEM.

#### **K. SUBMITTALS**

The contractor will be required to submit documentation of site activities to AEM. The submittals, at a minimum, will include material quantities & material specifications (PVC).

#### **L. SCHEDULE**

This project needs to be completed with 45 days of the notice-to-proceed.

Henry County’s selection of a firm shall be based upon the demonstrated competence and qualifications of the firms to provide the type of service required. Each proposal will be evaluated and scored through a process by the County’s staff. The Proposer’s submittal must fully address the requirements listed in this solicitation and the Firm’s degree of experience, knowledge, and ability to provide experienced and qualified support staff. The proposal is not to have any exclusions, conditions or provisions applied to the aforementioned request. It is the County’s intention to select a firm which is the most qualified to meet the County’s needs. The award shall be based on but not limited to the following factors:

| RFP EVALUATION CRITERIA   | Scoring Value<br>Maximum Points   |
|---|---|
| <b>Qualifications</b>   | 25  |
| <b>Relevant Experience and References</b>   | 25  |
| <b>Understanding and Approach of the Project</b>  | 30  |
| <b>Cost Proposal</b>  | 20  |
| <b>MAXIMUM SCORING POINTS TOTAL</b>   | 100   |
|   |   |
| <b>Oral Presentation and Product Demonstration</b> - At its sole discretion, the Evaluation Committee made up of County employees may require an interview/presentation before the final selection and award to a Firm. Submittal of material and information during an interview/presentation could add up to 15 additional points to the total score of the Firm. | 15<br>(possible additional points if an oral presentation is requested) |
| <b>The Scoring Formula for the above Scoring Value Maximum Points is as follows:</b>  |   |
| Excellent   | .75 - 1.00  |
| Good  | .50 - .74   |
| Fair  | .25 - .49   |
| Poor  | 0 - .24   |
| Multiply scoring formula by possible scoring value maximum point allotment. <i>Example:</i> If you score a firm .6 (Good) on <b>Relevant Experience and References</b> and multiply .60 x 25 (maximum scoring points), this would equal to 15 points.   |   |
