3. When it is not easily determined whether a project equals or exceeds the applicable DRI threshold, the Regional Commission must consider the following factors in making its determination:

- **Speculative Developments.** If final development type is difficult to determine because project tenants have not yet been identified, use the thresholds for the highest intensity development type allowed by current land use regulations. If there are no such local development regulations, estimate the likely type and scale of development based on the real estate market potential of the project site.
- **Multi-phased Developments.** Applicants shall submit all phases of the project at inception of the project, rather than submitting each phase one at a time. However, if the applicant seeks local government approvals for smaller phases individually, the determination of whether the project is in fact a multi-phased development should be based on considerations as to whether a master plan has been prepared for the overall project or whether any approvals have been sought for the entire project as a unit. If the multi-phased nature of the project cannot be established in advance, whenever a phase is submitted for approval that, when combined with all previously approved phases of the project built during the past five years, cumulatively equals or exceeds the applicable DRI threshold, the proposed new phase, plus any incomplete portions of the project must be submitted as a DRI.
- **Multiple Land Parcels.** If parts of the project are located on separate land parcels, the decision whether the project is a single (perhaps multi-phased) development, or actually separate projects should be based on such considerations as whether the
